

Functional readouts retain their experimental context

a Same substitution, different assays

Font: 20 μ M radiolabeled cystine $\cdot$ HeLa cells
He: 200 μ M selenocystine $\cdot$ HEK293 cells $\cdot$ 30 min
He: 3 independent transfections, technical triplicates

b R365W: culture condition

Pineda 2004 $\cdot$ SLC3A1

33 $^{\circ}$ C culture

49 $\pm$ 4% WT

Mean $\pm$ SEM
11 independent experiments

37 $^{\circ}$ C culture

No uptake above background

Qualitative source observation

R365W uptake measured at 37 $^{\circ}$ C.
Culture and measurement temperatures
are distinct experimental conditions.

Source summaries are displayed separately; differences do not isolate a system, substrate or timing effect.
